

## **Inclusion of Dentistry in the Family Health Program (PSF)**

### **Abstract**

The Family Health Program (PSF) was created in 1994 through the Ministry of Health, with the main objective to prioritize the promotion, protection and recovery of health and achieve integrity and universality of attention. For these objectives to be achieved and there was an improvement in access and the oral health status of the population, dentistry has been joined this program in 2000 Going to be a new model of performance on the oral health problems of the population, providing access, planning and the feasibility of a quality dentistry in the NHS. The objective of this paper is to report on dentistry in Brazil and the importance of their inclusion in the PSF.
